

8. America is relying more and more on electric power today to run everything from computers to heaters to electric cars, and some parts of the country already suffer from a shortage of electricity. Some have said the only way to generate enough electricity is to build new nuclear power plants. But, in the aftermath of the nuclear disaster in Japan, new questions have arisen. Do you think America should press forward to once again begin building nuclear power plants, or should plans for nuclear power plants be shelved?

Table of observed frequencies:
