

5. Nearly everyone agrees the country's \$14 trillion in national debt is going to cost the country a very steep price to pay off one way or another. One plan calls for the Federal Reserve to print \$14 trillion in new money to pay off the debt once and for all. Those who advocate this solution say this is a good way to resolve our federal debt problem once and for all, but those who oppose this idea say this would seriously devalue the dollar and would likely cause massive inflation that could plague the economy for many years and cost all Americans a significant amount of money. Would you favor or oppose such a plan?
